DETAILED ACTION

1. This office action is in response to the amendment filed on November 15, 2006.
2. Claim 3 is amended. Claims 1-2, 12-15, 17-20, 23, 32, 49-58 and 62 are canceled. Claims 3-11, 16, 21-22, 24-31, 33-48, 59-61 and 63-65 are pending and presented for examination for this office action.

Allowable Subject Matter

3. Claims 3-11, 16, 21-22, 24-31, 33-48, 59-61 and 63-65 are allowed.

The following is a statement of reasons for the indication of allowable subject matter: Claim 3 identifies distinct features, "the file transmission request is sent to other client computers connected to the host computer, if no client computer connected to the sub-network is responsive to the file transmission request, then corresponding files are received from a client computer selected from among the other client computers, connected to the host computer, responsive to the file transmission request, wherein a CPU occupancy ratio of the file distribution/transmission/reception module is relatively smaller than that of the application program execution module such that influence of the file distribution/transmission/reception module executed in the background process with respect to the application program execution module executed in the foreground process can be minimized". The closest prior art, Leber et al (U.S. Pub. No.

2003/0233455) disclosing a file distribution/transmission/reception module depending upon an application program executable in a client computer performing process corresponding application program execution module, fails to suggest the claimed limitation as mentioned above in combination with other claimed elements. The above features in conjunction with all other limitations of the dependent and independent claims 3-11, 16, 21-22, 24-31, 33-48, 59-61 and 63-65 are hereby allowed.
